

Innovative Blanket Solutions line of premium printing blankets all feature smooth, buffed surfaces, advanced compressible layers, and strong stable carcasses. The surface compounds provide excellent results and allow for easy clean up as well as excellent release.

IBS-762

Excellent 4-ply blanket for Sheetfed Offset as well as Web. Minimal dot gain. Premium quality blanket is ready and waiting to take the place of your current blankets.

IBS-556

Versatile 4-ply blanket that is compatible with conventional as well as hybrid inks. Durable surface and strong carcass just like all of the IBS series blankets.

IBS-811

A Great 4-ply blanket for high speed offset and web applications. Extremely stable carcass.

IBS-760

Durable 3-ply blanket with excellent resistance to edge cutting. Great when changing sheet sizes.

FUJI

Fujikora 5-Ply: Olive green compressible blanket with a smooth, buffed surface.

IBS-704

Specifically designed for UV. Surface is resistant to swelling caused by UV inks.

Novurania produces State-Of-The-Art coating blankets with an array of features not found anywhere else. All Novurania coating blankets are re-useable and work extremely well with Aqueous and UV coatings. These blankets can be used for hand cutting, or CAD cutting.

SPOT

COATING PLATE

High quality strippable varnishing plate. Super strong mylar carcass. Easy stripping coupled with superior resistance to penetration by coatings and cleaners.

399

DESIGNER

4-ply coating blanket with a cloth backing. A layer of mylar is in the middle of the blanket with layers above the mylar that are easily stripped away, still leaving behind a highly stable backing

303

REVOLUTION

Top of the line - premium quality coating blanket. Same configuration as the 399 above, but with the addition of an advanced surface and compressible layer for even better coating results.

All of these Novurania coating blankets provide you with the following advantages:

- Excellent affinity and transfer for water based acrylic coatings & UV.
- Increased longevity.
- Excellent resistance to swelling effects.
- Zero gauge loss.
- Can be stored and re-used many times.
- More affordable alternative that can often be used in place of "Cyrel" type coating plates.
- Increased resistance to smashes due to a cotton layer insert.
- Smooth surface to optimize the finishing stage with gloss water based and UV Varnishes.
- Relief depth reduces coating and varnish build up allowing for longer running periods.
- No solvent or coating penetration into carcass
- Gives up to 10 points more gloss than conventional stripping blankets.
